

E1 Path dependence

Matched wealth; different histories
Reference domain + portfolio ranking

E2 Shared setup + estimator

Four fixed targets; matched expected cost
Bias / variance / CLT / MSE scaling

E3 Continuous online tracking

Same setup; slow dynamic state path
Residual + DLR, cumulative / average

E4 Robustness envelope

Does the E3 advantage persist?
Reference / horizon / optimizer scale

E5 Real-market portfolio evaluation

Time-ordered A-share backtest
Net growth + drawdown

E6 Investor behavior prediction

Held-out sell / hold opportunities
Prediction loss + calibration

E7 Simulated investor interaction

Heterogeneous agents informed by E6
Adoption + satisfaction
